About CFC

CFC is a specialist insurance provider and a pioneer in emerging risk. With a track record of disrupting inefficient insurance markets, CFC uses proprietary technology to deliver high-quality products to market faster than the competition while making it easier for brokers to do business. Our broad range of commercial insurance products are purpose-built for today's risks, and we aim to give our customers everything they need in one, easy-to-understand policy.

Headquartered in London and backed by Lloyd's, CFC serves more than 70,000 businesses in over 80 countries. We're privately held and growing faster than any of our competitors in the market.

Although insurance is a serious business, our culture isn't too corporate, and we never take ourselves too seriously. We are 'one-team' and enjoy a culture of openness and encouragement. We invest heavily in the learning and development of our people and enjoy a fast-paced working atmosphere that is friendly, supportive, and fun.

Role Definition

Technology is a key differentiator to the CFC business. After investing heavily during the last couple of years to build our technology function, we now need to look at driving greater efficiency and a faster delivery of value.

The role of DevOps Engineer is wide ranging, including infrastructure centric aspects of Cloud Architecture and Site Reliability Engineering (SRE) through to optimising the Software Development Lifecycle (SDLC) using techniques such as Lean and BDD.

Key to driving our technology strategy forwards you will implement practises and approaches that drive throughput and enable the business to test new products, pricing & capabilities rapidly out in the marketplace.

Role definition & key responsibilities

You will:

- In conjunction with the architects help us evolve our cloud infrastructure in a safe, reliable, automated and cost-effective manner enabling the business to deploy products and capabilities rapidly
- Enable others do their jobs more efficiently by introducing new processes, approaches and technologies
- Help create and build the Technology Target state
- Be a thought lead in the Cloud & DevOps space
- Participate in planning efforts with stakeholders and IT department
- Raise the security bar
- On failure events, work on fixing the issues and communicating with senior members of the team
- Work as part of a small team and successfully manage your own tasks according to the larger needs of the business;

Skills & Ability

- Enterprise experience of Azure (AWS is a plus)
- Excellent understanding of SDLC best practises
- Excellent understanding of Infrastructure as Code / Desired State Configuration (Terraform, Ansible, etc)

- Experience with containers / service mesh / orchestration is a plus
- Good understanding of Azure DevOps
- Good understanding of DevOps-centric concepts
- Good general infrastructure knowledge
- Good general development skills

Education & qualifications

- A relevant degree with IT/Technology or equivalent professional certifications
